PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/800,350

Applicant(s)

KRASNOPEROV ET AL.

Examiner

Sean E. Aeder

Art Unit

1642

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 18 June 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 26-29, 32-56 and 63-68 is/are pending in the application.
- 4a) Of the above claim(s) 35-56 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 26-29, 32-34, and 63-68 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 9/1/06; 4/16/07; 6/18/07.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____.
- ☐ Notice of Informal Patent Application
- ☐ Other: _____.

Detailed Action

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114.

Applicant's submission filed on 6/18/07 has been entered.

Claims 26-29, 32-56, and 63-68 are pending.

Claims 35-56 have been withdrawn.

Claims 26, 34, 63, and 64 have been amended by Applicant.

Claims 26-29, 32-34, and 63-68 are currently under examination.

Rejections Withdrawn

The rejection of claims 63 and 64 under 35 U.S.C. 101 is withdrawn.

The rejection of claims 26-29, 32-34, and 63-68 under 35 U.S.C. 112 first paragraph, for failing to comply with the written description requirement, is withdrawn.

Rejections Maintained

Provision Nonstatutory Obviousness-Type Double Patenting

Claims 26-29 and 32-34 remain provisionally rejected on the ground of nonstatutory obviousness-type double patenting, and newly added claims 63-68

Art Unit: 1642

are provisionally rejected on the ground of nonstatutory obviousness-type double patenting, as being unpatentable over claims 1-23 of copending Application No. 10/949,720. Although the conflicting claims are not identical, they are not patentably distinct from each other because the antibodies of claims 1-23 of 10/949,720 anticipate the claimed cells and the genus of antibodies which bind to the extracellular domain of an EphB4 protein and inhibit activities of Ephb4 recited in the pending claims.

In the remarks filed 12/12/06, Applicant requests that the Examiner hold this rejection in abeyance until allowable subject matter is found: at which point, Applicants will submit a terminal disclaimer if deemed necessary.

35 USC § 103(a)

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The rejection of claims 26-29, 32-34, and 63-68 as being unpatentable under 35 U.S.C. 103(a) as being unpatentable over Stephenson et al (BMC Molecular Biology, 12/21/01, 2(15): 1-9) in view of Queen et al (US Patent 5,693,762; 12/2/97) for the reasons stated in the Office Action of 8/16/06 and for the reasons set-forth below.

Art Unit: 1642

In response to the Office Action of 8/16/06, Applicant amended claims 26, 34, 63, and 64. Further, Applicant argues that the cited references fail to provide any motivation leading the skilled artist to combine the teaching of Stephenson et al and Queen et al. Applicant further argues that Stephenson et al does not teach that inhibition of EphB4 would promote apoptosis in colon cancer cells. Applicant states that Stephenson et al does not suggest that one could use inhibitors of either Eph receptors or Ephrin as anti-cancer therapeutics. Applicant further states that Stephenson et al teaches that the role of EphB4 and other Eph receptor family members in cancer has not yet been defined. Applicant further states that the cited references fail to provide a reasonable expectation of success that antibodies to EphB4 would be effective in promoting apoptosis.

The amendments to the claims and the arguments found in the remarks filed 12/12/06 have been carefully considered, but are not deemed persuasive. In regards to the argument that the cited references fail to provide any motivation leading the skilled artist to combine the teaching of Stephenson et al and Queen et al, the Office Action of 8/16/06 states: **"Stephenson et al teaches that EphB4 protein is expressed on colon cancer tissues and either not at all, or in only low levels, in normal tissue (see Figure 4, in particular). Stephenson further teaches that therapies targeting EphB4 protein could be used in anticancer treatments (see page 2 left column, in particular). Due to the expression pattern of EphB2 protein, one of skill in the art would recognize that antibodies against EphB2 protein would also be used in methods of diagnosing colon cancer."** Further, the Office Action of 8/16/06 clearly states:

Art Unit: 1642

"...one would have been motivated to create said radioisotope, fluorescent, enzyme, and enzyme co-factor labeled bispecific antibodies because bispecific antibodies would function as diagnostic and therapeutic agents that recruit effector molecules (toxins, drugs, prodrugs, cytokines, radionucleotides) or effector cells (cytotoxic T lymphocytes, NK cells, macrophages, granulocytes) to the colon cancer cells expressing EphB4. Further, one have been motivated to create said radioisotope, fluorescent, enzyme, and enzyme co-factor labeled single chain antibodies because said antibodies would be more successful at targeting diagnostics and therapeutics to EphB4 expressing colon cancer cells than the entire immunoglobulin molecule taught by Stephenson et al. Further, one would have been motivated to create said radioisotope, fluorescent, enzyme, and enzyme co-factor labeled chimeric antibodies since chimeric antibodies have shown some therapeutic success. Further, one would have been motivated to isolate said human antibodies and to create radioisotope, fluorescent, enzyme, and enzyme co-factor labeled humanized antibodies because, as compared to non-recombinant mouse monoclonal antibodies and non-recombinant rabbit polyclonal antibodies, human and humanized antibodies would be more effective diagnostically and therapeutically effective because they are expected to (i) interact better with the human immune system (i.e. CDC and ADCC), (ii) reduce the HAMA response and (iii) the humanized antibodies will presumably have a longer half-life more similar to naturally occurring human antibodies, allowing smaller and less fragment doses to be given. Further, cells and transgenic animals expressing single chain, chimeric, and humanized antibodies specific for

Art Unit: 1642

the extracellular domain of EphB4 would be created while creating the antibodies taught by the combined teachings of Stephenson et al and Queen et al.” Further, one of skill in the art would recognize that the bispecific, single-chain, chimeric, human, and humanized antibodies taught by the combined teachings of Stephenson et al and Queen et al would be monoclonal.

In regard to the arguments that Stephenson et al does not teach that inhibition of EphB4 would promote apoptosis in colon cancer cells, arguments that the prior art does not suggest that one could use inhibitors of either Eph receptors or Ephrin as anti-cancer therapeutics, arguments that the role of EphB4 and other Eph receptor family members in cancer has not yet been defined, and arguments that the cited references fail to provide a reasonable expectation of success that antibodies to EphB4 would be effective in promoting apoptosis, it is first noted that the pending claims are drawn to a product and not to a therapeutic method. Further, the discovery of a previously unappreciated property of a prior art composition, or of a scientific explanation of the prior art's function, does not render the old composition patentably new to the discoverer. *Atlas Powder Co. v. Ireco Inc.*, 190 F. 3d 1324, 1374, 51 USPQ2d 1943, 1947 (Fed. Cir. 1999). Thus, the claiming of the unknown property of inducing apoptosis, which is inherently present in the combined teachings of the prior art, does not make the pending claims patentable. In the absence of evidence to the contrary, the combined teaching of Stephenson et al and Queen would predictably produce the antibodies recited in the pending claims.

Art Unit: 1642

The rejection of claims 26-29, 32-34, and 63-68 as being unpatentable under 35 U.S.C. 103(a) as being unpatentable over Inada et al (Blood, 1997, 89(8):2757-2765), in view of Stephenson et al (BMC Molecular Biology, 12/21/01, 2(15):1-9), in further view of Queen et al (US Patent 5,693,762; 12/2/97) for the reasons stated in the Office Action of 8/16/06 and for the reasons set-forth below.

In response to the Office Action of 8/16/06, Applicant amended claims 26, 34, 63, and 64. Applicant further states that Inada et al does not suggest or teach any therapeutic use or potential of the EphB4 antibody. Applicant further states that absent any teaching in Inada et al that the EphB4 antibody may have any therapeutic value, one of ordinary skill would not have been motivated to modify Inada's antibodies to make bispecific, single-chain, chimeric, human, and humanized antibodies against EphB4. Applicant further states that Examiner has failed to show that a skilled artisan would have predicted with a reasonable expectation of success that EphB4 antibody is capable of promoting apoptosis in a tumor cell.

The Response to the Office Action of 8/16/06 has been carefully considered, but not deemed persuasive. In regards to the argument that Inada et al does not suggest or teach any therapeutic use or potential of the EphB4 antibody, the pending claims are drawn to a product and not a method. In regards to the argument that one of ordinary skill would not have been motivated to modify Inada's antibodies to make bispecific, single-chain, chimeric, human, and humanized antibodies against EphB4, one would have been motivated to modify the antibodies using methods taught by Queen et al (to make bispecific,

Art Unit: 1642

single-chain, chimeric, human, and humanized antibodies against EphB4; see previous 103 rejection) since Stephenson et al teaches that antibodies against EphB2 protein would be used in methods of diagnosing colon cancer and one of skill in the art would recognize that, from the teachings of Stephenson et al, antibodies against EphB2 protein would be useful in methods of diagnosing colon cancer.

In regards to the argument that Examiner has failed to show that a skilled artisan would have predicted with a reasonable expectation of success that EphB4 antibody is capable of promoting apoptosis in a tumor cell, the discovery of a previously unappreciated property of a prior art composition, or of a scientific explanation of the prior art's function, does not render the old composition patentably new to the discoverer. *Atlas Powder Co. v. Ireco Inc.*, 190 F. 3d 1324, 1374, 51 USPQ2d 1943, 1947 (Fed. Cir. 1999). Thus, the claiming of the unknown property of inducing apoptosis, which is inherently present in the combined teachings of the prior art, does not make the pending claims patentable. In the absence of evidence to the contrary, the combined teaching of Indada, Stephenson et al, and Queen would predictably produce the antibodies recited in the pending claims.

Summary

No claim is allowed.

Conclusion

Art Unit: 1642

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sean E. Aeder, Ph.D. whose telephone number is 571-272-8787. The examiner can normally be reached on M-F: 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shanon Foley can be reached on 571-272-0898. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
